

Madison Traditional Clean-Face
LUXURY DIRECT-VENT FIREPLACE

AMERICAN HEARTH

We design every American Hearth fireplace using the best available technology and build each one to the highest-quality standards in our manufacturing facility in Belleville, Illinois.

We make most of our components – from cutting steel to forming to welding to hand painting our log sets – and then hand assemble each fireplace to ensure the best fit and finish. For purchased parts, we give preference to North American suppliers – our tempered and ceramic glass, the paint and powder coating, and even the packaging we use to protect our products until they reach your home.

The result is a fireplace that's built to last by experienced craftsmen and craftswomen – a fireplace that's as deeply rooted in history as fire itself – American Hearth.

Luxury Madison
Clean-Face Fireplace
with Traditional Stone Liner
and Alexandra Doors

ACCESSORIZE WITH LINERS & MORE

The Luxury Fireplace includes a ceramic fiber brick floor that helps support the massive log set. Add the matching Cottage Brick liner or change the look of your fireplace with the Traditional Stone or Black Porcelain liner. The Traditional Stone set features rugged squared stones, while the contemporary Black Porcelain set adds depth.

Cottage Brick

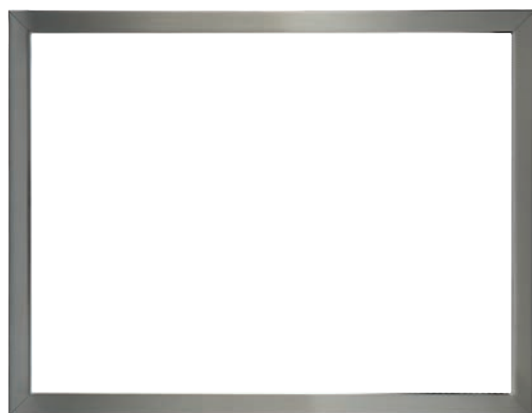

Traditional Stone

Black Porcelain

Add a decorative front to your new direct-vent luxury fireplace. Choose from two styles in brushed nickel. Your front or frame attaches in seconds. Each fireplace comes with a fireplace barrier screen to prevent contact with the hot glass. Add the available andirons to convey an old-world look.

Beveled Window Frame in Brushed Nickel

Alexandra Doors in Brushed Nickel

The available dimmer-controlled lighting kit draws attention to your American Hearth fireplace even when no fire is burning. Enhance heat distribution with the optional variable-speed blower.

Optional Variable-Speed Blower

Madison Traditional Clean-Face LUXURY DIRECT-VENT FIREPLACE

With its large ceramic glass window and clean-face design, this American Hearth luxury direct-vent fireplace looks just like a site-built fireplace, but delivers the convenience and operating efficiency of a modern gas system. The traditional luxury clean-face fireplace is available in 36-inch and 42-inch models.

Your Madison fireplace is heater rated, so it warms your room just as efficiently as it warms your heart. Zone heating with a gas fireplace saves energy while warming the rooms you use most. The available blower helps circulate warm air more quickly.

Designed for in-wall installation, these American Hearth luxury clean-face models require just over 22 inches of depth. The venting connects to the top of the fireplace but can run out the wall or up through the roof. Use tile or other noncombustible material to conceal the outer edge of the fireplace and create a true built-in system.

These direct-vent fireplaces draw in fresh outside air to support combustion and exhaust combustion by-products to the outdoors. The 5 x 8 vent-within-a-vent isolates the incoming fresh air from the exhaust, yet still requires just a single hole through the wall or roof.

The Luxury Clean-Face Madison has a ceramic glass view window for exceptional heat transfer and a unique burner that delivers a rich flame pattern. The 10-piece ceramic fiber log set is hand painted for stunning realism with detailed bark, knots, and charring.

THE TECHNOLOGY BEHIND THE FIRE

Madison Luxury Clean-Face Fireplaces are offered in three distinct technologies, each offering unique features and advantages.

The premium-level Multi-Function Remote system includes a thermostat remote that lets you light the fire with the intermittent pilot, adjust the flame height, operate the variable-speed blower, and control the built-in lighting. This sophisticated fireplace requires electricity for day-to-day-operation, but includes a battery backup so it can provide heat during power outages.

The Intermittent Pilot system also includes battery backup, but includes an on off switch to light the burner. The IP system works with a variety of controls – from wall switches to thermostats to on-off battery remotes and programmable remotes.

Millivolt models feature a standing pilot you light at the beginning of the heating season. While the pilot burns a small amount of gas, this simple system operates without electricity or batteries. Like the IP system, the Millivolt system works with almost any Empire control system.

While each of these fireplaces will continue to provide heat in a power outage, the blower and lights will not work.
